Description

The hard, but very durable core of the stick is covered with a layer of flexible foam, two layers of plastic, and hemmed with a thick, abrasion-resistant cover. Thanks to this structure, our sticks can withstand even sharp sparring matches without breaking, while dampening the force of blows quite well. We know because we have been pairing them ourselves for over a year - you can see what it looks like in practice in the videos below or on the [YT channel of the Sunday Sparring Meetings](#), where we have been practicing with them since 2019.

Informacje o produkcie

- Training baton, dimensions 60 cm, weight 175 grams and a diameter of 4 cm;
- Flexible and durable core;
- Cover resistant to abrasion;
- The hardness is selected in such a way that the stick fits well in the hand, but also dampens the impact force.
